2026 Strategy

Enterprise Technology
& Services (ETS)

January 2026

Manulife

Our refreshed strategic priorities build on our strong foundation and support our ambition of being the *#1 choice for customers*

Purpose: Decisions made *easier*. Lives made *better*. | **Ambition:** Be the *#1 choice* for customers.

STRATEGIC PRIORITIES

Winning Team and Culture
Champion a customer-first culture and invest in next generation skills

Diversified Business Portfolio
Drive a balanced, diversified business model that fuels future growth

Empowering Customer Health, Wealth, and Longevity
Become the most trusted partner in health, wealth, and financial well-being

AI-powered Organization
Continuously deploy AI to improve experiences, reimagine how we work, and create value

Superior Distribution
Make it easier for customers to buy, advisors to sell, and partners to grow

ENABLERS

Digital-first Integrated Platforms
Deliver connected experiences through digital-first unified platforms for sales and servicing

Capital Strength, Financial Discipline, Long-term Vision
Fuel long-term growth with robust capital and financial discipline, and flawless execution

Risk & Governance
Maintain resilience through strong risk controls and governance models

VALUES

- Obsess about customers
- Do the right thing
- Think big
- Get it done together
- Share your humanity
- Own it

- Customers
- Colleagues
- Shareholders/ Investors
- Community

Note: See "Caution regarding forward-looking statements" above.

INTERNAL

Technology Strategy on a Page

VISION: Empower Manulife with Technology as a strategic asset & value accelerator

MISSION: Contribute to Manulife's targets of 18%+ ROE and <45% expense efficiency targets by generating $540M of value from 2025-2028

	Frictionless Customer Experience	Outstanding Colleague Experience	Dynamic Delivery Experience	Robust Technical Core	Future Ready Talent
Point of Arrival	▪ Achieve Digital Customer Leadership ▪ Unified View of Customer with personalization at scale ▪ Customer first mindset towards resolving customer issues	• Empower colleagues to enable AI powered organization • Enable colleagues with the right tools to work efficiently	• Optimize capacity against highest priorities determined by market leads • Evolve our SDLC through AI and automation to ensure speed, and consistency of delivery	• Evolve current cloud and cyber infrastructure through AI, self healing, resilience • Automate risk and governance framework • Optimize global architecture for resilience against emerging technologies including AI	• Fungible talent pools on shared capabilities that is scalable globally • Enabled AI powered organization through Manulife University • Balance inclusivity and next generation of skills to power our growth
nhalPlan of Attack	▪ Execute DCL Roadmap ▪ Deliver Data and AI Roadmap Objectives ▪ Focused capacity towards incident and customer problem resolution	▪ Promote citizen development and make AI products widely available to reimagine work and create value ▪ Identify and optimize resolution of top colleague technology irritants (EBF)	▪ Continuous planning cycles (minimum quarterly) to maximize transparency, utilization, and flexibility of capacity against top priorities in each BU ▪ Streamline SDLC through AI and Automation	• Complete Cloud Evergreen program and enhance cyber through AI and automation • Streamline risk framework and automate compliance • Develop a repeatable globally aligned reference architecture with AI driven self healing and resilience capabilities	▪ Develop scalable, AI enhanced, shared capabilities for Technology ▪ Scale Manulife University (MU) for digital and AI upskilling ▪ Develop inclusive recruitment pipelines, promote next generation of skills through early talent development
Success Measures	• Deliver Digital Customer Leader Targets • Deliver Data and AI Roadmap Targets • Achieve P1 MTTR, Reliability, error rate, page load times targets	• Deliver on the colleague irritants roadmap • Achieve 60Th percentile in Gallup Score of the question "I have the right tools and processes to do my job"	• ODF project Green > 80% • IT labour spent on Build 68%	• IRM composite score of 95% • Control awareness 50% • % slipped issues from original date 15%	• IT engagement score in top quartile • % of Top talent (HiPo) turnover <7% • Risk culture of 4.5

Foundational Accelerant: Technology Transformation though AI and Automation

Engineering / Build enablement through AI

Platform and marketplace for Agentic AI

KLO automation

Platform for AI, GOCC automation in incident management, KLO efficiencies through workflow optimization and automation.

Shared Service, governance and support automation

Shared services and outsourcing optimization, IRA governance simplification, and built in automation for governance

Workforce optimization

Workforce optimization through AI and location strategy and transition to outcome based delivery model for 3rd parties

Manulife

Highly Confidential

Our Technology Transformation

Guiding Principles

★ ***North Star:*** *Achieve a fully automated, self-service technology environment where routine provisioning and operational tasks require no human intervention consistently.*

Value-Based Convergence

We align where there is clear value and a compelling vision, not by mandate, regulatory needs. Our segments converge when it benefits everyone.

Value-Driven Prioritization

We focus on initiatives that deliver the highest organizational value, using transparent measurement and prioritization.

Automation First

We prioritize automation and agent-driven solutions for all repeatable, routine tasks, reducing manual work and increasing efficiency.

Balanced Transformation

We combine grassroots innovation with strategic, large-scale transformation – delivering both quick wins and long-term impact.

Self-Service Enablement

We empower teams to fulfill their own requests through self-service platforms, with automation ensuring fulfillment and governance.

Refreshed ETS Strategy 2026

Frictionless
Customer Experience

Reduce Manulife's customer impact in minutes through operational excellence

- Build Intelligent and Predictive monitoring through dynamic thresholding and auto recovery
- Implement 360 customer experience monitoring for all top digital properties – enabling trend analysis
- Take a proactive, prioritized approach to fixing issues or gaps that have the greatest effect on customers or business performance

Dynamic
Delivery Experience

Simplified and seamless experience of ETS owned services

- Enable Gen AI and Agentic AI at scale via platform enablement
- Identify and deliver on Tech for Tech automation use cases
- Continue to prioritize capacity for high priority initiatives
- Maintain discipline on project delivery

Outstanding
Colleague Experience

Improve time to market of services using technology and creative solutioning

- Develop AI solutions with standardized playbooks for build and deploy
- Offer Agentic AI marketplace - a catalog of AI Agents for consumption as deemed fit
- Enable process simplification and automation via project SwiftStream
- Remove irritants for staff, driving productivity (WHFB, Agentify help desk)

Robust
Technical Core

Architecting resilient infrastructure through proactive and adaptive risk practices

- Deliver on R2R program deliverables
- Significantly reduce Kyndryl footprint via migration and/or decommission
- Complete Network Standard Refresh
- Continue to mature FinOps Practice and Software license management practice
- Excel at architectural basics at scale, build software for re-use

Future-Ready
Talent

Enable a winning culture of innovation by leveraging OneETS model

- Drive workforce management and development through strategic decisioning
- Invest in IT development centers globally to develop for niche talent needs and future leaders
- Knowledge-centered culture: Upskill talent for future career journeys
- Take advantage of MBPS structure to form strategic Centres of Practice

Foundational Accelerant: Technology Transformation through AI & Automation

Apply a principles-led approach to automate KLO, scale capabilities, and deliver incremental value.

ETS 2026 Home Runs:

Theme	*Owner*	*2026 Commitment*
Network	Greg Rowe	The team commits to **increasing automation for network security group (NSG) provisioning and firewall changes,** focusing efforts on **Azure** environments where volume is highest, and aiming to move from manual processes to straight-through, **self-service** automation for segments. Dedicated resources will be prioritized to accelerate delivery, with requirements **managed centrally** to ensure consistency and reuse. Progress will be tracked and reported, with clear dates and ownership for implementation.
EUS	Greg Rowe	Implement an AI-driven operations strategy that proactively **self-heals, enhances self-service, and deploys human-like conversational support**—integrating with existing tools, reducing manual effort, and achieving a zero-service desk model within 12 months.
Tech Intelligence	Tabitha Creighton	The team commits to creating an **integrated technology and application intelligence e**cosystem. The platform will rely on **CMDB, CSDM, and LeanIX** to create end-to-end data quality and integrations. These form the foundation of developing intelligence that enable tech and app owners to make strategic decisions.
Infra and Environment Provisioning	Anshul Chadda Tabitha Creighton	Stream 1 focus fulfillment: The team commits to optimizing and streamlining provisioning by automating standard tasks, reducing manual approvals, and enabling **self-service for engineers and develop**ers. The goal is to **minimize provisioning time, consolidate approvals** into a single upfront process, and reference solution architecture for compliance, with ongoing improvements based on user feedback and process analysis. Stream 2 focus Process Simplification: Implement a **primary approver workflow** (done upfront) as owned by Architecture (includes NFR, Solution Arch Guardrails, solution design documents, NFR, AI etc.)
Change Reset	Joan Lee	The team commits to implementing the **out-of-box ServiceNow change management form and process**, eliminating legacy customizations, automating risk analysis and approvals, and streamlining the change lifecycle to reduce manual effort and lead times. Phase one will deliver immediate productivity gains by **reducing CAB hours** and simplifying approvals; phase two will further enhance detection of unauthorized changes, **dependent on CMDB improvements**. Adoption will be mandatory, with collaboration and communication across segments to ensure successful rollout and realization of efficiency targets.
Batch	Hari Pothakamuri	The team commits to **automating batch operations** by migrating manual batch monitoring and execution processes to cloud-based solutions, integrating AI frameworks for transaction failure detection and reporting, and reducing manual intervention. Resources and program management are in place, with a focus on buying proven agents where possible rather than custom development. Segments are expected to support testing and migration activities, with the goal of **delivering measurable productivity savings and operational efficiencies.**
Problem	Hari Pothakamuri	*Commitment to be determined post discovery.*
AI Ops / Incident Troubleshooting	Hari Pothakamuri Leslie MacLean	The team commits to leveraging existing tools (such as Moogsoft and New Relic) to **enable proactive monitoring, automated incident detection, and resolution for critical applications**, focusing on reducing manual intervention and improving MTTR and MTTD. The plan includes training support teams to document resolution steps, feeding data into AIOps platforms, and scaling successful implementations from pilot applications to broader enterprise adoption, with ongoing process discipline and integration across segments
Unified Support	Hari Pothakamuri Leslie MacLean	For 2026, the commitment is to **centralize and automate support for IaaS cloud application**s, starting with ETS-owned gold applications, by transitioning L0/L1/L2 support to GOCC with **full automation and self-service capabilities**. The approach will **prioritize repeatable, routine tasks, aiming for a scalable model** that can later extend to other segments and application types, while more complex platform and app support will be addressed in subsequent years
Financial and costing support automation	Roya Rezaie	We are committed to leveraging Apptio to **strengthen our TCO capabilities, enhance financial transparency, and automate cost allocation**. We will also lead efforts to drive process improvements and deliver measurable value through expanded automation and operational excellence.

ETS 2026 Goals

How we contribute and deliver toward our global technology strategy.

Review the following document for a deep dive on ETS tower goals:

↪ Click here to open

Customer Experience

Reduce customer impact and improve digital experience through operational excellence by implementing predictive monitoring and proactive issue resolution.

Success Metrics:

- **Achieve P1 MTTR of <2.5 hrs and P2 MTTR of < 7 hrs**
- **Reduce # of P1/P2 incidents to ≤56 annually**
- **Maintain Reliability ≥99% and Error Rate ≤0.1%**

Delivery Experience

Accelerate delivery and improve project health.

Success Metrics:

- **Ensure ≥80% of ODF projects in Green status**
- **Achieve Change Success Rate >98.5%**

Colleague Experience

Enhance employee experience and productivity through better tools and processes by leveraging AI, modern digital tools and reducing friction in workflows.

Success Metrics:

- **Improve Gallup score for "I have the right tools" to ≥60% percentile**

Technical Core

Strengthen infrastructure resilience and compliance.

Success Metrics:

- **Achieve IRM Composite Score ≥95%, % slipped issues < 15% and Control Awareness ≥50%**
- **Improve Portfolio Health for Gold Apps ≥80%**
- **Keep Incidents Caused by Change <20% and Incidents reported by Monitoring > 60%**

AI and Automation

Apply a principles-led approach to automate KLO, scale capabilities, and deliver incremental value.

Success Metrics:

- **Generate value of $11.7 from AI**

Talent

Build a culture of innovation and upskill our workforce for future needs. Drive engagement and development.

Success Metrics:

- **Employee Engagement Score >4.49**
- **Limit HiPo turnover to ≤5% annually**
- **Deliver ≥40 training hours per colleague**
- **Fill ≥40% of Director+ roles internally**

Financials

Optimize costs and generate value through efficiency and automation.

Success Metrics:

- **Keep Total General Expenses ≤$670M**
- **Generate $40M from growth investments**

ETS 2026 KPIs

Strategy Pillar	Sr#	Category	KPI Name	2026 Global	2026 ETS
Financials	1	Tier 1	Total General Expenses (PFSS)[1]	$2,008	$670
	2	Tier 1	Value Generated from Growth Investments[2]	$162	$40
	2A	Tier 1	a. Workforce Efficiency (5%)	$60	$8
	2B	Tier 1	b. Software Saves	$15	$2
	2C	Tier 1	c. Vendor Saves	$17	$1
	2D	Tier 1	d. ETS Growth Absorption (value)	$25	$25
	2E	Tier 1	e. BAU to BOW (value)	$25	-
	2F	Tier 1	f. KLO-AI Productivity	$20	$4
Frictionless Customer Experience	3	Tier 1	P1 Mean Time to Recovery (MTTR)	2½ hrs	
	4	Tier 1	Value enabled by AI - Technology	$80M	$11.70
		Tier 1	Total Company DCL Tier 1 KPIs		
	5	Tier 1	Customers Digitally Active	43%	
	6	Tier 1	Relationship NPS for end customers	32	
	7	Tier 1	Transactional NPS for end customers	42	
	1	Tier 2	# of P1 & P2 Incidents	<190	56
	2	Tier 2	Page Load Time (in Seconds)	<2s	
	3	Tier 2	Customer Impacting MTTR	5½ hrs	
	4	Tier 2	P2 MTTR	7 hrs	
	5	Tier 2	% High Value Data ingested in the EDL	100%	
	1	Shadow KPI	Reliability %	99%	
	2	Shadow KPI	Error Rate %	<0.1%	
	3	Shadow KPI	Mobile Crash Rate	<0.1%	
Outstanding Colleague Experience	8	Tier 1	Gallup score of “I have the right tools and processes to do my job”	60%ile	
	6	Tier 2	DEX Score	87	
	4	Shadow KPI	IT Net Promoter Score (IT eNPS)	70	
	5	Shadow KPI	New Hire Incidents in first 30 days	<1	
Dynamic Delivery Experience	9	Tier 1	% IT Labor Spend on Build Activities (Global Excl. ETS & GCS)[4]	68%	
	10	Tier 1	% of ODF Projects in Green	>80%	
	7	Tier 2	Moving Data Faster (days)	33	
	8	Tier 2	Change Success Rate	>98.5%	
	6	Shadow KPI	Sprint Predictability Index		
	7	Shadow KPI	Executed Functional Test Automation Rate		
	8	Shadow KPI	% Defect Leakage		
	9	Shadow KPI	Test Management Adoption %
